American Wave Machines Selected by Zoom Flume Water Park

– PerfectSwell™ artificial wave generator chosen for 10,000 sq. ft. wave pool –

Solana Beach, CA – October 25, 2007– American Wave Machines, Inc. (AWM), an innovator in artificial wave technology, announced today that Zoom Flume Water Park, the largest water park in the New York Catskills, has selected the PerfectSwell traveling wave generator for its newly planned 10,000 square foot wave pool.

Nestled in the scenic northern Catskill Mountains, Zoom Flume, offers safe water fun, excitement and relaxation for all ages in a beautiful natural setting. Just over two hours north of New York City and just one hour south of Albany, Zoom Flume is close enough to both for a great day trip and far enough for an unforgettable vacation. The park offers a wide variety of water attractions, including water slides, rafting, pools and rivers.

Zoom Flume selected AWM for direct conceptual design, engineering, supply, and installation of the PerfectSwell wave generator. In PerfectSwell, AWM has developed a unique approach to gravity wave generation. This approach does not require expensive vacuum or hydraulic pumping and therefore can create large waves at comparatively lower power. That means bigger, better waves at lower operating costs. This patent-pending system has all the advantages of pneumatic systems, but creates waves more like wind-generated waves in the ocean; the perfect waves for surfing.

“We like the collaborative approach AWM is taking to design this wave pool for our water park. As the inventors of PerfectSwell, they have a deep understanding of the technology and can design the type of wave generator that fits our needs,” said Frank Aragona, owner of Zoom Flume.

“Zoom Flume offers a great experience for their guests in a natural setting,” said Bruce McFarland, president of AWM. “We’ll be working with Zoom Flume directly to design a wave generator to meet their unusual site and performance requirements. Our goal is to help create a realistic surfing experience for all people to enjoy safely.”

About American Wave Machines, Inc.

American Wave Machines, Inc. (AWM) develops artificial wave technology that replicates the experience of real ocean surfing. Its patented SurfStream™, the world’s first standing wave machine, is a technology breakthrough that delivers real surfing and wave riding capabilities. The company also offers PerfectSwell™ and WindSwell™ wave generators. AWM surf technology is available for waterparks, surfparks, hotel resorts, and sponsored wave-riding exhibitions.
